• [Aquareal 2 Screensaver](#)

• [Clownfish Screensaver](#)

• [Dolphins Screensaver](#)

• [VR Aquarium Screensaver](#)

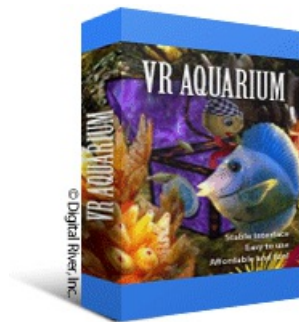

• [Ancient Ocean Screensaver](#)
(coming soon)

• [Seahorses Screensaver](#) (coming
soon)

Here you will find high quality screensavers all dedicated to underwater themes. Although they are not all technically "aquarium" screensavers, they are still along the theme of fish in water. Aqua Garden, and VR Aquarium are all 3d aquarium screensavers, while Clownfish, Aqua Real 2, and Dolphins are set in the ocean. They are all beautiful screensavers and have all been hand picked for their high quality and amazing 3D animations. Hope you enjoy!

MU I RAUQA RV

This aquarium screensaver is probably the most unusual screensaver I have seen. I would describe it more as a game than a screensaver. It allows you to completely build your tank from scratch, buy and sell fish, and learn about all the fish species available.

In fact, this piece of software makes an excellent learning tool for anyone interested in learning more about fish in an interesting way. If you are looking for a screensaver for your kid(s) then this is the one to consider. The animations are a little funky and "cutesy", but this screensaver is not about being realistic. It is about being fun.

What makes it truly "VR" is the fact that your fish grow and that you can breed them. You can go to the fish shop and buy young fish, go to your tank and breed them, then go back to the store and sell them! Brilliant!

It's a few more dollars than most aquarium screensavers but it is well worth the investment if you are looking for a truly interactive and fun educational experience.

2 LAERAUQA

This is the most popular screensaver made by Digifish. It has incredible animations of tropical fish in amazing ocean environments. Watching this screensaver really is like being there with the fish, right there in the coral reef.

Aquareal 2 is comes with tons of fish and animated environments. It comes with 26 beautiful fish species and 3 gorgeous animated coral reefs. Among the most impressive features is the clown fish that interact with the sea anemone growing on the coral reef. They just swim in and out of it in an ultra realistic way.

This ocean screensaver also has interactive elements. You can touch the fish making them change directions, and you can feed them making them "leap" towards the food. Also, there are sharks lurking in the shadows which you can force to come through the crowds of fish at any time.

Overall, this is the best underwater screensaver I have ever seen!
